

The ABCDE of Melanoma

AUSTRALIAN
MELANOMA
RESEARCH
FOUNDATION

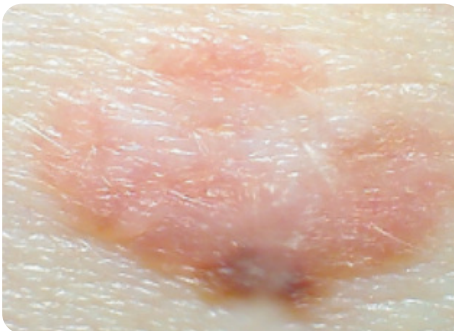

Asymmetry

One half doesn't match the other.

Borders

Edges are irregular or jagged.

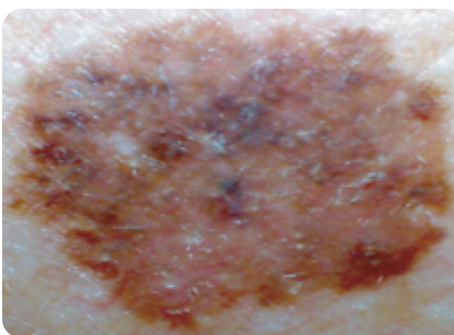

Colour

Colour is not the same all over or has changed.

Diameter

Larger than 6mm or growing in size.

Evolving

Change in size, shape, colour, elevation.

Melanoma is one of the most serious forms of skin cancer, but when detected early, it can be treated successfully in 90% of cases.

If you notice any new or changing spots, don't wait, have them checked by a healthcare professional as soon as possible.

About the Australian Melanoma Research Foundation

The Australian Melanoma Research Foundation is a not-for-profit committed to empowering Australia's next generation of melanoma researchers.
